Three Audience Segments

Segment 1: Combat Pro Athletes

Segment 2: High School Athlete Parents

Segment 3: Performance Lifestyle

Prepared by WebMarkets | CLn SportWash Campaign | Phase 1 Build

LANDING PAGE 01 | **SEGMENT 1: COMBAT PRO ATHLETES**

STRATEGIC OVERVIEW

Framework: PAS (Problem, Agitate, Solution) + 4U's

Target Insight: Combat athletes know skin infections are real occupational hazards. They have experienced one or watched a training partner lose weeks to one. Fear of missing training time is visceral and immediate.

Core Message: CLn SportWash is the difference between staying on the mat and sitting at home with a staph infection.

Key Differentiators: Physician-developed, clinically formulated for combat sports environments specifically. Not a consumer hygiene brand.

Psychological triggers: Loss aversion (missing training), professional identity (staying competitive), urgency (every session is an exposure).

HERO SECTION

One Infection Can Cost You Weeks. This Won't.

CLn SportWash is physician-developed, medically formulated protection against the staph, ringworm, MRSA, and impetigo living on every mat, glove, and training surface you touch.

[CTA Button: Protect Your Training]

PROBLEM SECTION

The Mat Doesn't Care How Hard You Train

You've seen it happen. A training partner misses two weeks with a staph infection. A wrestler scratches from a tournament with ringworm. A fighter's camp gets derailed not by a bad opponent or a rough sparring session, but by something picked up off a mat.

Contact sports training environments are high-exposure zones for skin infections. Shared mats, borrowed gear, sweat-soaked surfaces, and close-contact training create continuous exposure to bacteria and fungi that standard body wash never touches.

AGITATION SECTION

Every Session Is an Exposure

Staph bacteria can survive on training surfaces for hours. MRSA is common enough in wrestling programs that the NCAA tracks it. Ringworm spreads through gyms at rates that surprise most athletes who haven't dealt with it personally.

The question isn't whether you're being exposed. You are. The question is whether you're doing anything about it.

SOLUTION SECTION

Physician-Developed. Built Specifically for Combat Sports Athletes.

CLn SportWash was formulated by physicians who understand exactly what athletes are exposed to in training environments. It isn't a hygiene product. It's a preventive medical tool, developed to eliminate the specific bacterial and fungal pathogens responsible for the infections that pull combat athletes out of training.

One bottle. One addition to your post-training routine. No lifestyle change required.

BENEFITS SECTION (3 TILES/COLUMNS)

What You Get

Clinically Formulated

Targets the bacterial and fungal pathogens specific to combat sports environments, including staph, MRSA, ringworm, and impetigo. Not just clean. Protected.

Physician-Developed

Built by physicians, not a marketing team. The formula behind CLn SportWash comes from clinical expertise in athletic skin health.

One Simple Habit

Post-training. Every session. That's it. No complicated routine changes. It takes the same amount of time as any other body wash.

SOCIAL PROOF SECTION

Trusted by Combat Sports Athletes and the Physicians Who Treat Them

[Testimonial placeholder: athlete or physician quote. Suggest pairing with American Top Team footage or a sports medicine physician endorsement.]

FINAL CTA SECTION

Don't Let a Preventable Infection Take You Off the Mat

You put in the work. You control your training, your diet, your recovery. Skin infection prevention is no different. CLn SportWash is the one habit most combat athletes aren't doing yet.

LANDING PAGE 02 | **SEGMENT 2: HIGH SCHOOL ATHLETE PARENTS**

STRATEGIC OVERVIEW

Framework: AIDA (Attention, Interest, Desire, Action)

Target Insight: Parents of HS contact sport athletes are protective but often unaware of the specific infection risk. They aren't in the locker room. They trust coaches to keep things safe but feel helpless when illness strikes.

Core Message: There is a simple, physician-developed product that protects your athlete from skin infections in contact sports. You can put it in their bag today.

Key Differentiators: Physician-developed (authority signal for parents), easy to add, gives parents something actionable they can control.

Psychological triggers: Parental protection instinct, authority (physician-developed), control (actionable, simple, immediate).

HERO SECTION

What's Living on Your Athlete's Practice Mat?

Staph, ringworm, and MRSA are common in high school contact sports environments. CLn SportWash is physician-developed protection that fits in any gym bag, takes 60 seconds, and actually works.

[CTA Button: Protect Your Athlete]

ATTENTION SECTION

High School Contact Sports Carry a Skin Infection Risk Most Parents Don't Know About

Every wrestling mat, every shared piece of football equipment, every locker room bench your athlete uses is a potential source of skin infection. Staph bacteria. Ringworm. Impetigo. MRSA.

These aren't rare. Athletic trainers and team physicians deal with them regularly. They sideline athletes for days or weeks at a time. And most standard soap and body wash offer no meaningful protection against them.

INTEREST SECTION

This Isn't a Hygiene Problem. It's a Medical One.

Physicians who work with contact sport athletes know that shared training environments create a fundamentally different kind of exposure than everyday life. The bacteria and fungi that cause skin infections in sports settings thrive in warm, humid, high-contact conditions.

Regular body wash is designed to remove visible dirt. It isn't formulated to address the pathogens responsible for the infections that pull athletes off the field.

There is a difference. And most families don't realize it until an infection has already happened.

DESIRE SECTION

One Addition to the Post-Practice Routine That Changes the Equation

CLn SportWash was developed by physicians specifically for athletes in contact sports environments. It targets the bacterial and fungal pathogens most likely to cause infection, using a clinically formulated wash your athlete uses after every practice.

The routine doesn't change. The protection does.

- Physician-developed formula designed for contact sports environments
- Protection against staph, MRSA, ringworm, and impetigo
- Simple post-practice use, same as any body wash
- Recommended by sports medicine physicians and dermatologists

SOCIAL PROOF SECTION

Recommended by the Physicians Who Know Contact Sports

[Testimonial placeholder: sports medicine physician or sports dermatologist quote. Suggests Dr. Jen Gordon, Dr. Obed, or Aslan Nelson as strong fits for this segment.]

ACTION / FINAL CTA SECTION

Keep Your Athlete on the Field

You can't control what's on the mat. You can control what's in their gym bag.

[CTA Button: Shop CLn SportWash]

LANDING PAGE 03 | **SEGMENT 3: PERFORMANCE LIFESTYLE**

STRATEGIC OVERVIEW

Framework: FAB (Features, Advantages, Benefits) + 4U's

Target Insight: CrossFit athletes, gym regulars, and performance-oriented people think carefully about their training stack, nutrition, and recovery. They are optimization-minded and respond to specific, evidence-based claims over vague wellness language.

Core Message: Your post-workout routine has a gap. Physician-developed, clinically formulated protection is the one thing most serious gym-goers aren't doing yet.

Key Differentiators: Clinically formulated (specific, not generic), framed as performance optimization rather than a hygiene product.

Psychological triggers: Optimization identity (they track macros, they dial in recovery), peer-level authority, specificity over vague 'clean' claims.

HERO SECTION

Your Recovery Routine Has a Gap

Shared barbells, benches, and gym surfaces harbor bacteria that regular body wash doesn't address. CLn SportWash is physician-developed protection built for athletes who take every part of their training seriously.

[CTA Button: Close the Gap]

PROBLEM SECTION

Every Gym Is a Shared Environment. Most Athletes Treat It Like It Isn't.

You track your macros. You sleep eight hours. You invest in recovery. But after every training session, you're washing off the workout with the same body wash you've used since high school.

Shared barbells. Rubber flooring. Shared showers. These surfaces accumulate bacteria and fungi at levels that standard soap doesn't touch. Staph infections, ringworm, impetigo, and MRSA aren't just combat sports problems. They show up in CrossFit boxes, weight rooms, and high-traffic gyms regularly.

Most athletes don't think about it. Until they're out for two weeks.

PRODUCT INTRODUCTION

Physician-Developed. Designed for Athletes Who Optimize Everything.

CLn SportWash was developed by physicians as a preventive medical tool for athletes in high-contact, high-exposure training environments. It isn't a wellness product. It's a clinically formulated wash that targets the specific bacteria and fungi responsible for skin infections in training environments.

Same routine. Better protection.

FAB SECTION (FEATURE / ADVANTAGE / BENEFIT)

Feature: Clinically Formulated Anti-Bacterial and Anti-Fungal Formula

Advantage: Targets the specific pathogens (staph, MRSA, ringworm, impetigo) common in gym and training environments, not just surface-level cleanliness.

Benefit: You can train every day without a preventable skin infection wiping out a week or two of hard-earned progress.

Feature: Physician-Developed

Advantage: Created by medical professionals who work with athletes, not by a personal care brand optimizing for fragrance and shelf appeal.

Benefit: A formula you can trust with clinical backing, not marketing copy.

Feature: One-Step Post-Workout Integration

Advantage: No extra steps, no complicated routine, no timing protocols.

Benefit: The best protection is the kind you actually use consistently. This fits into what you're already doing.

SOCIAL PROOF SECTION

The Body Wash Serious Athletes Are Adding to Their Stack

[Testimonial placeholder: CrossFit coach, performance athlete, or sports dermatologist. Chris Gethin or a CrossFit-aligned influencer are strong fits for this segment per campaign outreach list.]

FINAL CTA SECTION

Optimize Every Part of Your Training. Including What You Wash With.

You've dialed in everything else. Post-workout hygiene that actually works is the last box to check.
